

# SeaLION 100N MANUAL

## SeaLion 100N-M Ascent Vest

A lightweight, compact and handy life vest for lifeguards and rescue swimmers.

With its manual release, it can be used as an ascent vest, giving the user extra buoyancy when bringing up a person from underwater.

The bladder has a buoyancy of 100N to ensure an even ascent.

There is extra webbing around the waist, and a D-ring on the back for attaching a safety line. If the safety line gets in the way during ascent, the webbing can be released to come free using the quick release toggle.

*SOLAS hi-vis reflector patch on the back simplifies monitoring of rescuers in the dark*
