

Optimum 5mm Gloves

Reference# 100842-L

Our Optimum gloves are a popular underwater neoprene glove. With a stylish and practical design, the Optimum glove is an ideal option for divers. We use a double layer of high-grade polymer to construct our Optimum gloves. From there, we add a Ti-Ax® Thermacote® heat-reflecting lining. This lining is silver to give maximum heat back to the wearer.

The Optimum glove interior is also Ti-Glide which makes the gloves easier to take on and off. Along with the Ti-Glide technology, we've used a full size wrist zip to further ensure the gloves are easy to pull on and off, whether they're wet or not. These features is included to make the wrist seal really tight-fitting. A tight-fitting wrist seal is essential to minimise water migration. While in some gloves this can make it difficult to pull over your hand, the design is developed to be easier to use and therefore work better for you.

On the exterior DiamondFlex is added on back of the hand. Not only does this look great, but it adds greater padding in the event of knocks or scrapes, therefore giving your hands added protection. The palms of the glove and all the fingers are embossed with Super-Tack technology. This gives you greater control and grip, which is ideal for underwater use. The Northern Diver Optimum gloves meet the requirements stated in Annex II of the PPE Directive 89/686/EEC.

- Material: Double layer premium polymer
- Thickness: 5mm
- Design: 5-finger glove
- Flexible and elastic fit
- Reinforced palms and fingers for better grip and strength
- Zip for easy donning and doffing
- Available in sizes: S, M, L, XL, XXL
