

Reach & Rescue Pole

Reference# 100848

The 6m reach pole provides a rapid, agile method to reach a conscious in-water casualty. The pole can equally be used to retrieve items from the water. The pole's maximum length is a considerable six metres, and the lightweight, durable fibreglass makes it very easy to operate at such a length. The pole's fully retracted length is a compact 1.8 metres. On the tip of the pole is an aluminium bayonet fitting for use with the supplied quick-release grapple hook, shepherd's crook attachments and the quick release attachment and buoy.
