

LifeClean disinfectant

Reference# 12603-6

LifeClean Disinfectant.

Disinfection of surfaces. Full effect on bacteria, viruses and fungi within 1 minute. Full effect on spores, eg Clostridium difficile and Bacillus subtilis, after 2 minutes.

It is recommended to wipe or rinse when local procedures dictate it and when there is uncertainty about how the material responds to disinfection.

Wash first if there are residues of previously applied chemicals on the surface as this may react with LifeClean.
